PROFESSIONAL SUMMARY

Full-Stack Software/Web Engineer with 3+ years of experience architecting high-performance networking protocols, scalable Linux server infrastructure, and secure enterprise web pipelines. Proven track record of optimizing multiplayer low-latency systems and building secure, high-throughput cloud applications for studios and government agencies.

SKILLS

- **Frontend:** React, NextJS, JavaScript (ES6+), HTML5, CSS3, Tailwind, GSAP
- **Backend:** Laravel, PHP, Node.js, NestJS, REST APIs, MySQL, NoSQL, Django, MongoDB, PostgreSQL
- **Tools and Technologies:** Git, GitHub, Webpack, Vite, Docker, Figma
- **Cloud Engineering:** AWS, Azure, Google Cloud Platform

WORK EXPERIENCE

GridLock-Games Studio: Full-Stack Developer

Jan 2026 – June 2026

- Architected core networking protocols and data translation logic between game clients, headless servers, and backend databases, reducing network latency by 67% and cutting desynchronization events by 50%.
- Engineered and managed full-stack Linux server deployments, optimizing infrastructure to achieve 98.9% uptime and scaling backend capacity to seamlessly support 500+ concurrent multiplayer users.
- Designed and programmed dynamic in-game UI systems, bridging visual front-end assets with backend data structures to improve UI rendering performance by 70% and reduce data-binding memory overhead.
- Implemented advanced Git workflows (branching strategies, merge conflict resolution, CI/CD pipelines) to maintain code integrity across a large, collaborative development team.
- Architected real-time, low-latency communication protocols and data translation layer pipelines, optimizing state synchronization between distributed client applications and headless cloud servers to slash network latency by 67%.
- Engineered scalable synthetic user simulation agents with adjustable behavioral states and modular complexity parameters, utilizing them to stress-test system workloads and evaluate backend API performance under varied load conditions.

Gridlock-Games Studio: Backend Web Developer

May 2023 – Jan 2026

- Designed and implemented scalable database schematics using MongoDB and Mongosh, utilizing TypeScript schemas to ensure strict data integrity, optimize document relationships, and support a 40% increase in data throughput.
- Developed, containerized, and maintained secure NestJS RESTful APIs, leveraging TypeScript to enforce strict validation, data sanitization, and custom middleware layers that reduced malicious request vulnerabilities by 55%.
- Engineered a custom network request interceptor and telemetry logging framework, identifying an implicit high-frequency internal loop anomaly to eliminate redundant database calls and slash monthly cloud infrastructure costs by 80% (reducing overhead from \$200/mo to \$40/mo).
- Designed and produced the company's Game Launcher using JavaScript and a third-party editor, including UI logic, update handling, and seamless API integration.
- Documented API endpoints, validation flows, and database structures for internal use and future development.

Bureau of Plant Industries | Biotech – Web Developer (Freelance)

Aug 2023 – Feb 2024

- Built a secure internal ingest pipeline allowing 500+ employees to systematically upload and organize research papers.
- Delivered a government-level website for the *Biotech/BuPlant division of the Department of Agriculture*, following strict security, accessibility, and documentation standards.
- Developed an optimized landing page showcasing 60+ and counting corporate projects dynamically to external stakeholders.
- Deployed and maintained projects on shared hosting, VPS, and cloud environments, configuring environment variables, SSL certificates, and optimized build pipelines.
- Utilized MVC architecture to ensure 100% modular code, allowing for seamless feature scaling in the future.

Department of Social Welfare and Development - Web Developer (Freelance)

Aug 2023 – Sep 2023

- Developed a centralized operations and resource management system for DSWD to track, review, and approve regional branch projects, funding requests, and workforce distribution.
- Architected a hierarchical role-based access control (RBAC) system with [3-5] distinct user tiers, ensuring 100% compliance with data privacy regulations for sensitive workforce data.
- Accelerated project review and resource approval cycles by around 70% through automated routing and notifications.
- Eliminated fragmented paper and Excel workflows by migrating legacy data to a centralized CMS, reducing physical administrative overhead by 85%.

EDUCATION

University of Caloocan City

Bachelor of Science in Information Technology

August 2021 – April 2025

- Java, JavaScript, HTML, CSS, PHP, MySQL, OOP, Data Structures, Algorithms, Web Development, Database Design, Networking, Software Engineering, API Integration, System Analysis, Project Management, Version Control (Git).
